

**AMENDMENTS TO THE SPECIFICATION**

**IN THE SPECIFICATION:**

**Page 5**

Please amend the Specification on page 5 beginning 25 line as follows:

Alternatively, the information identifying the transmission source set forth above preferably includes ~~either~~ any of the seventh information identifying the user of the transmission source ~~or~~ and the tenth information identifying a device of the transmission source.

Accordingly, determination can be made as to whether the second information is to be generated or not by the generation means, based on ~~either~~ any of the user of the transmission source ~~or~~ and the device of the transmission source. As a result, a control device that can control at high level an appliance connected to a network and absent of a high-level circuit, based on ~~either~~ any of the user of the transmission source ~~or~~ and the device of the transmission source, can be provided.

**Page 9**

Please amend the Specification on page 9 beginning 3 line as follows:

In the control system set forth above, the communication device for control preferably includes generation means for generating communication information that identifies ~~either~~ any of the communication device for control itself ~~or~~ and the user of the communication device for control. In addition, the communication means of the communication device for control preferably includes transmission and reception means for transmitting communication information, and receiving reception information transmitted based on the communication information.

**Page 10**

Please amend the Specification on page 10 beginning 18 line as follows:

Alternatively, the information identifying the transmission source set forth above preferably includes ~~either~~ any of the seventh information identifying the user of the transmission source ~~or~~ and the tenth information identifying the communication device for control of the transmission source.

Furthermore, the generation means set forth above preferably includes first storage means for storing, in correspondence with ~~either~~ any of the communication device for control itself ~~or~~ and the user of the communication device for control, a plurality of third information representing an operation to generate the second information, and operation means for generating second information by an operation based on any of the plurality of third information. In addition, the control device preferably includes select means for selecting third information used in generation of the second information from any of the plurality of third information, based on communication information identifying ~~either~~ any of the communication device for control itself ~~or~~ and the user of the communication device for control, received by the first communication means.

Page 16

Please amend the Specification on page 16 beginning 2 line as follows:

<Configuration of Control Unit ~~443~~ 150>

Page 30

Please amend the Specification on page 30 beginning 28 line as follows:

At S57, CPU 800 waits until reception information is received from ~~either~~ any of remote-control device 104 ~~or~~ and communication adaptor 108, based on the activated application.
